

APPENDIX: DEVELOPING PROMPTS

Intern Sprint Reference Guide · Prompt Catalog v1.0 · Distribution: UIUC MSFE Intern Team · May 16, 2026

§1 — Overview

The Metrixx Prompt Catalog is a working library of market intelligence prompts built and tested by the Metrixx AI team over the course of platform development. This appendix explains how interns will use the catalog file — `Metrixx_Prompt_Catalog_FullScriptsINTERNDIST05162026.xlsx` — to study prompt architecture, select existing entries for analysis, and develop original prompts of their own.

Every prompt in this catalog has been designed to produce structured outputs across three delivery formats: a short-form alert (≤ 50 characters), a long-form analytical response (≤ 50 words), and — for Options and Basis Service prompts — an Excel workbook with an embedded Claude AI sidebar. Interns are expected to understand this tri-format architecture before beginning their selections.

This exercise is not cosmetic. The prompts you develop in this sprint will be reviewed by the Publisher of Record, entered into `catalog.json`, assigned TOS clearance status, and potentially deployed to Metrixx AI subscribers. Quality, accuracy, and adherence to the publishing package requirements are non-negotiable.

§2 — File Structure

The catalog file contains 88 prompts organized across 14 market and audience categories. Each row represents one complete prompt entry with all three output scripts pre-populated. The nine columns are defined as follows:

Column	Field Name	Description	Usage
A	ID	7–8 digit unique prompt identifier (e.g., 9349512)	MASKED in all subscriber-facing output. Used internally for TOS tracking.
B	Prompt	The question or instruction submitted to Claude	Core input — the working text each intern builds upon.
C	Category	Audience / market segment tag (e.g., Novice, Pro, Options)	Used to route prompts to appropriate MY DESK catalog sections.
D	Alert Type	Short semantic label (trend, pattern, options, volume, etc.)	Drives icon selection and alert display logic in MY DESK.
E	Icon	UI icon slug for front-end rendering	Front-end only — do not modify without PM approval.
F	Short Alert	50-character alert response (~1 sentence)	Short Form deliverable. Fits MY DESK alert strip.
G	Long Alert	~50-word analytical response	Long Form deliverable. Displayed in MY DESK chat panel.
H	Video Script	Narrative guide for screen-recorded explainer content	MYCAST / video short source material.
I	MYCAST Script	Batch / portfolio-level version of the prompt output	Used when interns build multi-ticker ElevenLabs summaries.

⚠ IMPORTANT — Original Prompts vs. Existing Scripts

Columns F, G, H, and I contain the approved output scripts for existing prompts.

When you develop your original prompt (§3, Step 4), you must write your own versions of these columns — you cannot reuse scripts from other catalog rows for your original entry.

Columns A through E are metadata. You do not need to create new icons or alert type slugs for your original prompt — coordinate with the Publisher of Record on any new categories.

Available Categories — Prompt Inventory

The table below maps all 14 categories, their ID ranges, and prompt counts. Use this as your selection menu when completing Step 2 of the procedure.

#	Category	Prompt IDs	Count
1	General Market Trend Analysis	9349512 – 9349516	5
2	Candlestick Pattern Recognition & Analysis	9349517 – 9349521	5
3	Technical Indicator Insights	9349522 – 9349526	5
4	Pattern & Breakout Analysis	9349527 – 9349531	5
5	Options & Derivatives Analysis	9349532 – 9349536, 9999001, 9999003	7
6	Volume & Order Flow Insights	9349537 – 9349541	5
7	AI-Powered Forecasting & Market Sentiment	9349542 – 9349546	5
8	Crypto & Alternative Market Analysis	9349547 – 9349551	5
9	Novice Traders (Beginner-Level)	9349552 – 9349561	10
10	Semi-Experienced Traders (Intermediate)	9349562 – 9349571	10
11	Pro Traders (Advanced-Level)	9349572 – 9349581	10
12	Low-Risk / Consistent Profitability	9349582 – 9349586	5
13	Medium-Risk / Moderate Profitability	9349587 – 9349591, 9999002	6
14	High-Risk / High-Drawdown Traders	9349592 – 9349596	5
	TOTAL PROMPTS		88

§3 — Procedure

Each intern completes all four steps below before the catalog submission deadline (June 7, 2026). Steps 1 and 2 are team activities — coordinate via MY DESK in the #intern-prompt-catalog room. Steps 3 and 4 are individual deliverables.

STEP 1 — Review the Catalog File

Download and open `Metrixx_Prompt_Catalog_FullScriptsINTERNDIST05162026.xlsx`. Spend at least 30 minutes reading through the catalog in full before making any selections. Pay particular attention to:

- How the Prompt text in Column B is structured — notice the use of [ticker] and [timeframe] as variable placeholders that get substituted with real values at runtime.
- The relationship between Short Alert (Column F) and Long Alert (Column G) — the short form is a compressed single-line version of the long form. They must be thematically consistent.
- How Options and Basis Service prompts differ from general market prompts — these require the additional Excel output with Claude AI sidebar (see Step 3d).
- The MYCAST Script column (Column I) — this is the portfolio-level / batch version of the prompt, designed for ElevenLabs audio summary generation. Note how it differs from the single-ticker Video Script in Column H.

STEP 2 — Coordinate Prompt Selections (Team Activity)

Each intern selects exactly 3 prompts from the catalog. Selections must be coordinated across the team — no two interns may select the same prompt ID. The coordination protocol is:

1. Post your intended selections to the #intern-prompt-catalog room in MY DESK by May 21, 2026 (Wednesday).
2. The Publisher of Record will confirm or flag any duplicate claims within 24 hours.
3. Final selections are locked by May 23, 2026. Once locked, selections cannot be changed.
4. Update the Coordination Log below with your confirmed Prompt IDs.

Intern Coordination Log — Prompt Selection Registry

Complete and submit this log to the Publisher of Record by May 21, 2026. Final assignments confirmed by May 23.

INTERN	ROLE	CATALOG SELECTIONS (3 Required)	ORIGINAL PROMPT
Publisher of Record (PM)	Sprint Role	<i>Enter Prompt IDs after team coordination call</i>	<i>TBD</i>
Jocelyn Wu	Full-Stack Lead / Code Authority	<i>Enter Prompt IDs after team coordination call</i>	<i>TBD</i>
Aras Chang	Prompt Engineering	<i>Enter Prompt IDs after team coordination call</i>	<i>TBD</i>
Zilin Mao	Analytics / Sierra Chart	<i>Enter Prompt IDs after team coordination call</i>	<i>TBD</i>
Anna Wang	Excel / XLAM (part-time)	<i>Enter Prompt IDs after team coordination call</i>	<i>TBD</i>
Jingxi Wei	MIXX Analytics (part-time)	<i>Enter Prompt IDs after team coordination call</i>	<i>TBD</i>

SELECTION GUIDANCE

Interns are encouraged to select prompts that complement their sprint role. For example:

Aras Chang (Prompt Engineering) → Options & Derivatives, Advanced Pro prompts

Zilin Mao (Analytics / Sierra Chart) → Technical Indicator Insights, Volume & Order Flow

Anna Wang (Excel / XLAM) → any Options or Basis Service prompts requiring Excel output

Jingxi Wei (MIXX) → Forecasting & Sentiment, Volatility-related prompts

This is a guideline, not a restriction. Any intern may select any available prompt.

STEP 3 — Build a Prompt Brief for Each Selection

For each of your 3 selected prompts, complete a Prompt Brief using the template defined below. The brief is your formal documentation of the prompt — it summarizes what the prompt does, specifies the expected response in both short and long form, and (where applicable) includes the Excel deliverable.

3a — Prompt Brief Template

Complete one brief per selected prompt. Use the field requirements in the table below:

FIELD	REQUIREMENT	NOTES
Prompt ID	[MASKED] — shown as [REDACTED] in all published output	Publisher of Record controls the unmasked registry. Never expose raw ID.
Prompt Text	Copy verbatim from Column B, substituting [ticker] / [timeframe] with a real example for the sample	Substitution required for the sample — do not leave placeholders unfilled.
Category	Copy from Column C	Determines which MY DESK catalog section this prompt belongs to.
Prompt Summary	2–3 sentences describing what the prompt does and why it is useful	Written by the intern. Must be original — not copied from the script columns.
Expected Use Case	Name the subscriber audience (e.g., Novice, Pro, Options desk)	Match to Column C audience tag.
Short Form Response	≤ 50 characters — Alert-strip copy	Copy or adapt from Column F. Must fit one alert strip line.
Long Form Response	≤ 50 words — Chat panel analytical output	Copy or adapt from Column G. Must be complete and actionable.
Excel Output (conditional)	Required if prompt covers Options or Basis Service. See Excel Protocol §4.	Generate a new Excel workbook with embedded Claude AI sidebar. Submit .xlsx with prompt submission.
Publishing Package	Metrixx.ai logo · Disclaimer · MASKED Prompt ID	Apply to all output formats: short, long, and Excel. See §5.

3b — Short Form Response (≤ 50 Characters)

The Short Form is the alert-strip copy that appears in MY DESK when a prompt fires an alert. It must fit on one line and be immediately actionable. Rules:

- Maximum 50 characters including spaces.
- Must include the subject (ticker or market) and a directional signal or action.
- May adapt the existing Short Alert text from Column F, but should substitute real ticker values.
- No financial advice language — use informational framing ('Options alert:', 'Trend signal:', 'Volume spike:').

3c — Long Form Response (≤ 50 Words)

The Long Form is the analytical output displayed in the MY DESK chat panel. It expands the short-form signal with context, data rationale, and a suggested action direction. Rules:

- Maximum 50 words.

- Must be analytically complete — a subscriber should be able to act on or research this output without additional context.
- Must include: (1) the signal or observation, (2) the supporting data rationale, (3) a suggested next action.
- May adapt the existing Long Alert text from Column G — but must be rewritten to incorporate a real ticker and current market context example.
- No definitive investment recommendations — use conditional language ('traders may consider', 'monitor for', 'potential signal').

3d — Excel Output (Options & Basis Service Prompts Only)

If any of your selected prompts fall in the Options & Derivatives Analysis category OR any Basis Service-related prompt (cash vs. futures spread, delivery mechanics), you are required to generate an Excel workbook deliverable. The Excel output must include:

- A structured data sheet with the prompt parameters (ticker, contract, strike, expiration, IV metrics, or cash/futures spread values as applicable).
- An embedded Claude AI sidebar that is pre-loaded with the prompt text and the expected response, allowing the subscriber to re-run or modify the analysis interactively.
- The full Publishing Package applied to the workbook (see §5): Metrixx.ai logo in the header, disclaimer in a dedicated footer row, MASKED prompt ID in the workbook metadata.
- Coordinate with Anna Wang (Excel/XLAM lead) on the Claude AI sidebar implementation pattern — she owns the XLAM integration spec.

STEP 4 — Develop One Original Prompt

In addition to your 3 catalog selections, each intern develops one completely original prompt. The original prompt must:

- Not duplicate any existing catalog entry in concept or structure.
- Be relevant to the Metrixx AI platform — it should address a market intelligence use case, options or futures analysis, basis pricing, or a technical/sentiment signal type.
- Include all fields in the Prompt Brief Template (§3a) — written entirely by the intern.
- Be submitted with Short Form, Long Form, and (if applicable) Excel deliverable — all with the full Publishing Package.
- Be coordinated with the Publisher of Record before submission — new prompts must receive a preliminary TOS clearance review before being finalized.

ORIGINAL PROMPT GUIDANCE

Strong original prompt ideas tend to emerge from your sprint work. If you're building a signal in Sierra Chart (Zilin), working with IV surfaces (Aras), or developing an Excel model (Anna), the prompt you write should reflect what you're actually building.

Original prompts that connect directly to sprint deliverables carry more Demo Day value than generic market analysis prompts.

§4 — Worked Example

The following example shows a correctly completed Prompt Brief for an Options & Derivatives Analysis prompt. Use this as the reference standard for your own briefs. Note: this example is for illustration only — the Prompt ID shown is masked and this entry is not available for intern selection.

WORKED EXAMPLE — For Reference Only

Prompt ID: [REDACTED]

Prompt: Analyze the options flow for [SPY] — are institutions betting bullish or bearish?

Category: Options & Derivatives Analysis

Summary: This prompt queries current options flow data for SPY to identify whether institutional positioning is skewed bullish or bearish based on put/call ratios and block trade direction.

Short Form (≤ 50 chars):

"Options alert: consider a bullish call spread on SPY."

Long Form (≤ 50 words):

"Unusual bullish options flow detected in SPY. Call volume outpacing puts 2:1 with institutional block trades skewing to upside strikes. A call debit spread near current ATM strikes offers favorable risk/reward. Monitor IV for entry timing. Confirm with price action before execution."

Excel Output: Required — Options category. Generate SPY Options Flow workbook with Claude AI sidebar pre-loaded with this prompt and expected response ranges.

Disclaimer / Logo / Masked ID applied to all three output formats.

§5 — Publishing Package

All prompt output — regardless of format — must include the Metrixx.ai Publishing Package before it is considered complete. The Publishing Package consists of three elements applied consistently across short-form alerts, long-form responses, and Excel workbooks:

ELEMENT	SPECIFICATION	REQUIRED ON
Metrixx.ai Logo	Use the approved dark-background SVG logo asset. Minimum width 120px on screen / 1.5 inches in print. Position: top-left on all output cards.	All formats — Short, Long, Excel
Metrixx.ai Disclaimer	"Metrixx.ai analytics are for informational and educational purposes only and do not constitute investment advice. Past performance is not indicative of future results. Always consult a licensed financial professional before making investment decisions."	All formats — Short, Long, Excel
Prompt ID (MASKED)	Display as: Prompt ID: [REDACTED] Do not display the numeric ID in any subscriber-facing output. The Publisher of Record maintains the unmasked master registry in catalog.json.	All formats — Short, Long, Excel
Category Tag	Display the Category name from Column C as a metadata label (e.g., "Category: Options & Derivatives Analysis")	Long Form and Excel only
Version / Date stamp	Include: Version 1.0 · [Date] · Sprint Build	Excel only

Prompt ID Masking Protocol

The Prompt ID is an internal control number used by the Publisher of Record to manage the catalog, track TOS clearance, and maintain version history in catalog.json. It must never appear in subscriber-facing output. The masking standard is:

DISPLAY FORMAT: Prompt ID: [REDACTED]
NEVER DISPLAY: Prompt ID: 9349532

The Publisher of Record is the sole holder of the unmasked prompt ID registry. If a subscriber, institutional partner, or external party requests an unmasked ID, escalate to the Publisher of Record immediately — do not share the raw numeric ID under any circumstances.

§6 — Submission Gate Checklist

Before the Publisher of Record countersigns any prompt entry for catalog.json, all items below must be completed and verified. Incomplete submissions will not be processed.

✓	SUBMISSION GATE CHECKLIST — Publisher of Record countersigns before any entry reaches production
☐	Prompt IDs do not duplicate any teammate's selections (coordination log updated)
☐	Prompt text substitutes real values for [ticker] / [timeframe] placeholders
☐	Prompt Summary is original writing — not copied from script columns
☐	Short Form response is ≤ 50 characters
☐	Long Form response is ≤ 50 words and analytically complete
☐	Excel deliverable generated for all Options or Basis Service prompts
☐	Metrixx.ai logo applied (approved asset, correct sizing)
☐	Disclaimer applied verbatim across all output formats
☐	Prompt ID masked as [REDACTED] in all subscriber-facing output
☐	Original prompt includes summary, expected response, and — if applicable — Excel output
☐	Publisher of Record countersigned all four entries before submission to catalog.json

§7 — Key Dates

DATE	MILESTONE	STATUS
May 16, 2026	Catalog file distributed — this appendix issued	☐
May 21, 2026	Coordination Log due — post intended selections to #intern-prompt-catalog in MY DESK	☐
May 23, 2026	Final selections locked by Publisher of Record — no changes after this date	☐
June 3, 2026	All intern 1-page User Manual sections due to Publisher of Record	☐
June 7, 2026	Completed Prompt Briefs (3 selections + 1 original) due to Publisher of Record · catalog.json complete	☐

June 11, 2026	Demo Day dry run — Publisher of Record coordinates	☐
June 12, 2026	DEMO DAY	☐

Questions? Post to #intern-sprint in MY DESK. The Publisher of Record is the first point of contact for all catalog questions. Jim Marzano (CEO) for escalations.
